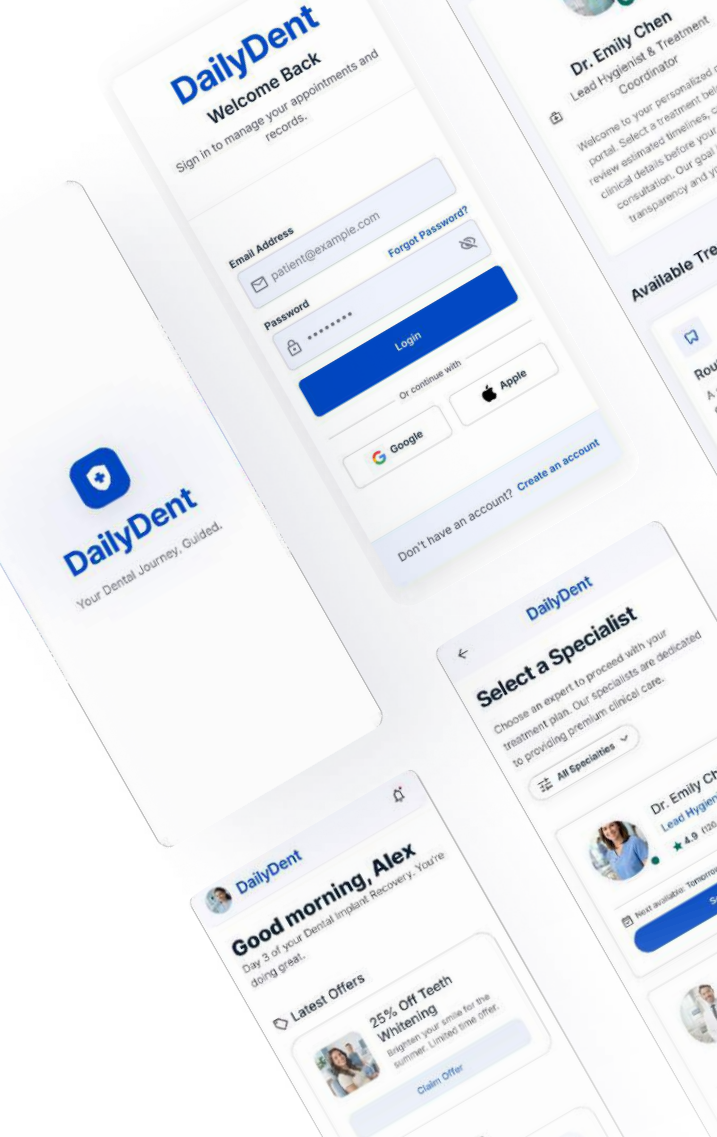
UX Case Study

Dental Treatment Case Study

Patient Engagement for Dental Treatments



DailyDent
Welcome Back
DailyDent
Good morning, Alex
Select a Specialist
Dr. Emily Chen

Problem Statement

The dental industry faces a challenge in establishing a robust and engaging communication channel between patients and dentists. Patients are reluctant to dental treatments as they lack understanding of treatment procedures. Dentists find it difficult to aware patients about treatment plans and complexities. Sub-optimal post treatment care leads to- Decreased treatment compliance, heightened complications risk, and reduced patient satisfaction.

Objectives & Goals

- Enhance Patient awareness and Education
- Patient- Dentist real time Communication
- Treatment planning and collaboration for dentists
- Improve Post-treatment Compliance

UX Process

Discover

Define

Ideate

Design

Ideation

- Online booking and payment
- Providing a notification system for doctor appointments
- Providing symptoms articles to patient
- Using video calls in the examinations for some conditions
- Automatically adjusting patients medication dose schedule

Product Users

The application will be use by new patient / Existing patient and Doctors.

My Role

I had created to fill different parts of the design process and I was responsible to conduct all kinds of UX activities and there are some of the deliveries produced.

- Competitive analysis
- User persona
- User Journey Map

Customer Feedback & Sentiment Analysis

My Invisalign

Positive Trends
Patients appreciate the comfort of aligners and find the wear-time tracker highly motivating. The app successfully keeps users accountable to their treatment plan.

Negative Trends
Frustration over app stability. Users report the app freezing, unexpectedly signing them out, and in severe cases, wiping out their photo logs and treatment history.

DentalMonitoring

Positive Trends
Highly praised for convenience. Patients love seeing clear progress from home and avoiding weekly office visits. Parents find it incredibly easy for their children to use independently.

Negative Trends
Very few negative reviews exist, though historically some users report a slight learning curve when first using the physical ScanBox attachment to capture clear photos.

DentiCalc

Positive Trends
Dentists find it to be an excellent tool for patient education and case presentation. The vast library of animations effectively bridges the knowledge gap, leading to higher case acceptance.

Negative Trends
Some users encounter issues with animations failing to load. Additionally, international users have requested broader currency support and clearer instructions on how to customize pricing.

User Needs

- View available time slots on the calendar for easy selection. The calendar should get updated in real time for available slots.
- View available time slots on the calendar for easy selection. The calendar should get updated in real time for available slots.
- Automated confirmation emails/ SMS notifications for scheduled appointments. Also reminder notifications sent to patients closer to the appointment date.
- A cost calculator to estimate the total expenses of the treatment, including possible financing options

Features & Functionalities

Appointment Reminders & Confirmation

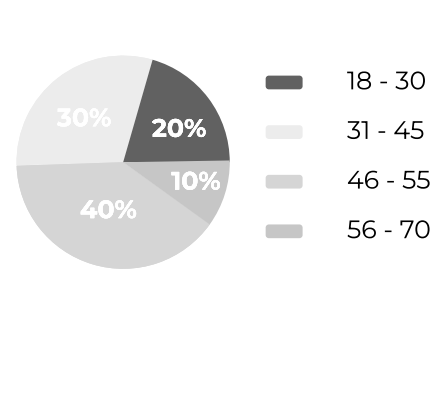
Treatment planning tools

Post-operative care guidelines

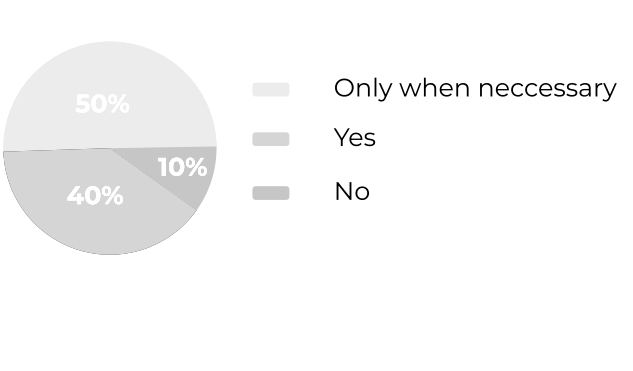
Patient Survey

We wanted to make sure that the user surveys are as simple and straight to the point as possible, we targeted overage user as audience.

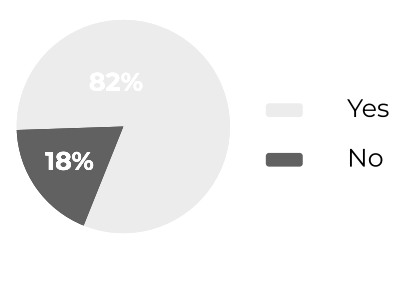
How old are you?



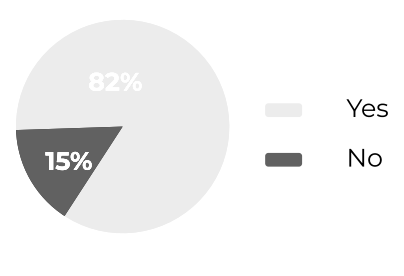
Do you regularly go to the clinc?



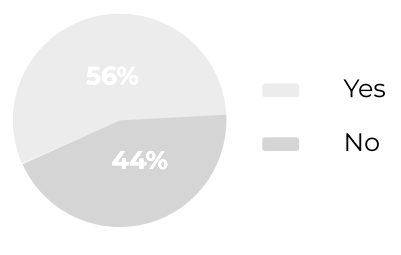
Do you suffer from toothache or symptoms ?



Have you ever booked an appointment with a Doctor online?



Do you prefer to use the online payment method?

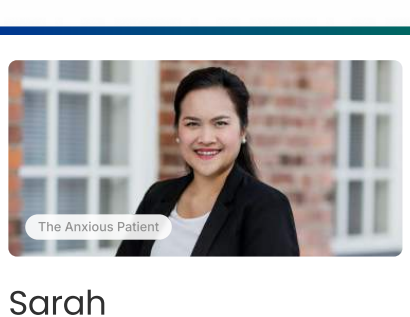


Unique Features

- Visual timeline of healing progress, allowing patients to compare and track changes over time
- Interactive tool that would visually demonstrate the treatment process and progress
- Calendar with reminders for follow-up appointments, medication schedules, and oral hygiene routines

Patient Profile

Understanding our users to build empathetic clinical experiences.



The Anxious Patient

Sarah
Marketing Executive, 28

SCENARIO
Needs a dental implant, terrified of surgery and the recovery process.

PREFERRED PAYMENT
Apple Pay / Digital Wallet

PERSONALITY
Tech-savvy
Detail-oriented
Health-conscious
Anxious but Proactive

> "I just want to know what's happening during the procedure so I can feel in control of my recovery."

Tech Fluency
High

Goals
- Understand every step of the procedure clearly.
- Feel 'in control' of the healing timeline.
- Reduce overarching anxiety regarding clinical visits.

Pain Points
- "I don't know what they're actually doing in there."
- Uncertainty about symptoms: "Is this swelling normal?"
- Overwhelmed by complex medical terminology.

Empathy Map

Says
"How long will the pain last?"
"I need to see a clear timeline of the recovery."

Thinks
"I hope I don't regret doing this procedure."
"Will my smile look natural afterward?"

Does
Searches symptoms online at 2 AM.
Double-checks medication times and sets strict alarms.

Feels
Anxious and highly vulnerable in the clinical chair.
Constantly seeking reassurance and validation from staff.

Patient Journey

User flow for scheduling dental appointments. A clean, high-trust clinical pathway.

Brand Identity

DailyDent

The 'Soft-Touch' Interface

Rooted in "Modern Corporate" clinical serenity, the visual language is designed to evoke calm, reliability, and professional care. It priorities clarity and reassurance, acting as a supportive, quiet companion rather than a complex tool. Generous whitespace, sophisticated translucency, and high legibility define the patient experience.

Color Palette

Primary Blue	Surface	Surface Container	Success / Healing	On-Surface
#2563eb	#f9f9ff	#eff4ff	#059669	#1a1c1e

Typography — Poppins

DISPLAY	Clinical Serenity 48px / 56px / Bold / -2% tracking
HEADLINE	A breathable layout 32px / 40px / Semibold / -1% tracking
TITLE	Assisted Recovery Companion 20px / 28px / Medium
BODY	The technology feels like a supportive, quiet companion rather than a complex tool. Spacing follows an 8px base unit. Section-level gaps are aggressive to emphasize content grouping, while internal card padding remains generous to prevent information density from feeling overwhelming. 16px / 24px / Regular

No swelling
It's throbbing too
Started yesterday

Hello Alex! I see you're experiencing some discomfort. To help you better, could you describe the type of tooth pain you're feeling?

I have a sharp pain in my upper left molar when I drink cold water.

I understand. Sharp sensitivity to cold can often be related to enamel wear or a small cavity. Have you noticed any swelling in that area?

Describe your symptoms...

Understanding Toothache

A toothache is pain in or around a tooth, often caused by tooth decay, infection, or receding gums. The pain can be sharp, throbbing, or constant, and may worsen with chewing, temperature changes, or lying down.

Immediate Relief at Home

Warm Salt Water Rinse
Dissolve half a teaspoon of salt in a glass of warm water. Swish the solution around your mouth for 30 seconds before spitting it out. Helps reduce inflammation and clean the area.

Cold Compress
Apply an ice pack wrapped in a thin towel to the outside of your cheek for 20 minutes. This constricts blood vessels, numbing the pain and reducing swelling.

Over-the-Counter Pain Relievers
Medications like ibuprofen or acetaminophen can help manage the pain temporarily. Always follow the package instructions and consult a pharmacist if unsure.

Gentle Flossing
Carefully use dental floss to remove any food particles or plaque wedged between your teeth that might be causing irritation. Be gentle to avoid further aggravating the gums.

Note: These remedies are for temporary relief only. They do not cure the underlying cause of a toothache.

Pain persisting?
Don't wait. Get professional care today.
